## PROJECTS

Blog Website - https://hectorsblog.herokuapp.com

- Created a Full stack dynamic Blog website following the MVC design pattern. With security login feature for multiple users. Allows the admin to manage other contributor's blog posts. The users have the functionality to add, edit delete and create a blog post.
- *Technologies Used: Java, Thyme Leaf, MySQL, JavaScript, TinyMCE, HTML, CSS, Bootstrap, Spring MVC, Heroku, Tomcat and Spring Dependency Injection.*

Superhero Sighting web page

- Worked on a team to create a full dynamic Java web application that allows the tracking of superhero sightings. The web application keeps track of superhero's characteristics, superpowers, organizations, location, and sightings. All the data manipulations were managed with in a relational database.
- *Technologies Used: Java, Thyme Leaf, MySQL, JavaScript, TinyMCE, HTML, CSS, Bootstrap, Spring MVC, Git/GitHub version Control*

SWIFT IOS Task management app

- Worked on a Full CRUD based application using MVC design pattern. Allows for multiple user accounts. Purpose of the application is to allow users to manage their personal tasks.
- *Technologies Used: SWIFT programming language, Core Data Framework, Realm Database*

Personal Landing page – ifHector.com

- Design wireframe and sitemap for a personal website. Website Crated to showcase past and current projects.
- *Technologies Used: Java Script, HTML, CSS, Bootstrap*
